

# XDCC Messaging

This program is used to create an XDCC message that contains info on your current XDCC offerings.

## To create a message:

1. Select to "Message all channels" or "Message only <channel>".
2. If you select to message only a certain channel, enter the channel name or select it from the drop-down list, which will contain all of the channels you were on when you started this program.
3. Select to message once or to create a timed message. If you select a timed message, enter the delay between message sends.
4. Select the delay to use between lines (if any).
5. Click **Start** and the message will be sent, and, if it is a timed message, a timer will be created to automatically repeat the message with the selected interval.

## To stop a timed message:

Once a timed message is created, you will see a "Kill Message" item beneath the "Create Message" part of the popups that you used to start this program. In that section, the channel that each timed message you have going will appear. Select the one you would like to stop.

Also, if you part a channel that you have a timed message being sent to, the timer will automatically be shut off next time it attempts to play it to that channel.

**Note:** if you change the XDCC file info, the changes will not automatically be in an existing timed message. You will need to create new messages also.
