The best way to check if a virus is detected by this version of Vet

For Vet95, Vet98 and VetNT users select Index (above), Find, Next>, Finish and enter the name of the virus.

For Vet for Windows 3.1x users select Search (above), Find, Next>, Finish and enter the name of the virus.

Please select from the list below for a complete list of each type of virus;

- Macro viruses detected by this version or Vet, Click Here to view the list.
- Boot sector viruses detected by this version of Vet, Click Here to view the list.
- File viruses detected by this version or Vet, Click Here to view the list.
- Viruses detected by polysearch for this version of Vet, Click Here to view the list.

For a list of all the viruses that have been added to Vet since the last major release Click Here.

Macro viruses detected by this version of Vet.

Why Should You Become a Registered Vet User.

This copy of Vet provides protection against all viruses that are known to be in the wild at the time of production. Unfortunately new viruses and new varieties of existing viruses appear on an almost weekly basis. Registered Vet Customers get a comprehensive solution for protection against viruses.

The services and benefits of becoming a registered Vet customer depend on the country where Vet was purchased. Services that are commonly offered are listed below.

1) A full set of user manuals - comprehensive installation and usage details (manuals are available in some boxes of Vet, from the Web site and are also on Vet CDs)

2) Additional installation options for networks and systems administrators

3) Access to the Vet internet web site and Bulletin board service - used to provide updates and general virus information

4) Free unlimited Email and phone support (See the Contact page for the support hours)

5) 48 Hour fixes - If you discover a new virus that Vet does not clean we will provide a solution within 48 hours of receiving a copy of the virus

6) Employee Protection - Any company holding a Vet site licence, that is a licence to install Vet on every PC in the work place, may allow all employees to install Vet on their home-use computers, free of charge.

7) On Site Support - Charges normally apply, but we are committed to supporting our registered Vet users

So, please return the registration card with the appropriate fee or talk to your local Vet sales team.

Year 2000 Conformity for the Vet Range

This document is a response from Cybec Pty Ltd, developer of the Vet Anti-Virus Software Range, to all concerned parties, regarding year 2000 conformity issues, based upon the definition DISC PD2000-1 produced by the British Standards Institute, and upon "SAA/SNZ MP77:1998: A Definition of Year 2000 conformity requirements". The SAA/SNZ document is almost identical to the BSI document, and "the only variations from the BSI document are the deletion of the list of British contributing organisations from the third paragraph of the Introduction, and the numbering of the clauses." (quoted from SAA/SNZ MP77:1998)

Introduction
This document describes the degree of conformity of Vet Anti-Virus software sold by Cybec Pty. Ltd. as listed in *Section C* of this document, to the BSI document DISC PD2000-1, "A Definition of Year 2000 Conformity Requirements" and to the SAA/SNZ SNZ MP77:1998: A Definition of Year 2000 conformity requirements. It is recommended that the reader refer to the relevant document for details.

Vet Year 2000 Compliance
General Integrity
Vet has been tested to ensure full compliance with the "General Integrity" rule.
This rule requires that all software which conforms to it is able to roll over between all significant time demarcations (eg days, months, years, centuries) correctly. This means that no value for the current date will cause any interruption in operation.

The current date in all Vet products is always displayed as reported by the operating system. The user does not enter or select dates in using Vet (except when using the Vet NT scheduler), which considerably simplifies the issues relating to Year 2000 compliance.

One area where dates are manipulated by the software is reporting to the user that the software is using out-of-date virus information; this is reported typically six months after the software is built. We need not consider any dates more than six months prior to the current date, because dates prior to the build of the software are not used. Neither are we concerned with dates significantly into the future, because no date beyond the current date is used. Leap years are not a consideration, because Vet does no date calculations in which the leap year variation would create any repercussions. Vet will continue to work correctly and recognise both 29th February and the day 366 in the year 2000.

Vet does not store dates in 2-digit format. The native date format for each platform is used. In the case of DOS and Windows 3.1x, the native date format stores the number of days elapsed since 1st January 1980AD in a 16 bit integer. This format has a built-in expiry date, which lies well into the second half of the next century. In the case of Windows 95, Windows 98, and Windows NT, the native date format stores the number of 100 nanosecond intervals elapsed since midnight 1st January 1600AD in a 64 bit integer. This format has a built-in expiry date far beyond the year 3000AD (which in fact is nearer to 30000AD), which should cause no problems.

In reporting dates and times for the start and finish of scans, Vet is using a system library function, which reports the current date as reported by the operating system, so there is minimal likelihood for confusion. This date and time format may be configured by the user to support 4 digit year dates during reporting, using the Windows Control Panel. DOS Vet uses four digit year dates.
Another area where Vet may use dates is when creating reference disks. This date and time format may be configured by the user to support 4 digit year dates during reporting, using the Windows Control Panel. DOS Vet uses four digit year dates.

Date Integrity
Vet has been tested to ensure full compliance with the "Date Integrity" rule.
This rule requires that all Vet products be able to calculate, manipulate and represent dates correctly for all purposes for which they were intended.

Dates used in Vet serve the following purposes:

1) Vet uses dates to inform the user when it is considered "out-of-date", meaning that it may be too old to detect the latest viruses. This is intended to remind the user that a newer version of Vet is available and should be installed.
2) Vet uses dates during reporting. This includes the reports Vet generates on-screen as well as in log-files. The purpose of the dates is to report the start and finish of each scan performed by the user, purely for reference reasons. In this way, Vet logs allow users to tell when the last scan was made, or when a virus was found.
3) Vet uses dates to program the Vet NT scheduler. Dates are used to prepare a schedule for when Vet should perform a scan automatically, without user intervention. This is perhaps one area where the use of dates in Vet is critical. The scheduler has been extensively tested to ensure full compliance with Year 2000 requirements.
4) Vet uses dates and times to identify when a reference disk was created. This date and time format may be configured by the user to support 4 digit year dates during reporting, using the Windows Control Panel. DOS Vet uses four digit year dates.

Explicit/Implicit Century
Vet has been tested to ensure full compliance with the "Explicit/Implicit Century" rule.

This rule ensures that one of two possible approaches is used in software:
(a) explicit representation of the year in dates: eg by using four digits or by including a century indicator.
(b) the use of inferencing rules: eg two digit years with greater value than 50 imply 19xx, those with a value equal to or less than 50 imply 20xx.
Vet does not use approach (b) in any situation. Explicit representation of 4-digit years is used in most cases (see "General Integrity" rule). In other cases, Vet will use 2 or 4 digits to represent the year, depending on your settings as defined in the Windows (Windows 3.x, Windows 95 or Windows NT) control panel.
 Vet Products Conforming to DISC PD2000-1
The products which conform to the DISC PD2000-1 and to the SAA/SNZ MP77 requirements are:

- Vet for DOS
- Vet for Windows 3.x
- Vet for Windows 95
- Vet for Windows NT Workstation
- Vet for Windows NT Server
- Vet Scheduler for Windows NT Server
- Vet for NetWare

The version of each of these products, which conforms to the DISC PD2000-1 and to the SAA/SNZ MP77 requirements is version 9.70 or later.

Legal Statement
Software supplied by Vet is supplied pursuant to the Vet Anti-Virus Software Licence Agreement ("VAVSLA") which can be found on the Vet master disks. This statement is considered to be part of the documentation supplied from time to time with the Software and is subject to the VAVSLA.

The VAVSLA provides, in part,

"to the fullest extent allowed under law, Cybec excludes all other terms, warranties and conditions, whether express or implied, relating to the performance, quality, or fitness for use of the Software or any disks on which the Software is recorded, including any warranty or condition that the Software will meet the Licensee's requirements or operate without interruption or error.

To the fullest extent allowed under law, and subject only to the express warranty contained in clause 6.2, the liability of Cybec for any breach of any term, condition or warranty, or duty of care, shall be limited, at

the option of Cybec, to any one or more of the following:

(a)   the replacement of the Software or the supply of equivalent Software;

(b)   the repair of the Software;

(c)   the payment of the cost of replacing the Software or acquiring equivalent Software; or

(d)   the payment of the cost of having the Software repaired.

The Licensee agrees that in no event will Cybec be liable for damages, including but not limited to, indirect, special, incidental or consequential damages (including loss of profits or anticipated revenue) in connection with or arising out of performance of the Software, even if Cybec or the dealer had been advised of the possibility of such damages."

Accordingly, users should not rely upon this document and make their own enquiries and engage professional assistance in relation to the suitability of the Cybec Software for use in their particular environment beyond the Year 2000.

Further:

•   Cybec cannot say and does not state whether or not its software will work in the environment or at the times other than for which the system was expressly designed and tested.   In particular, your computer systems may consist of hardware or third party software, which are not year 2000 compliant and which has not been tested by Cybec unless stated expressly otherwise.

•   It is your responsibility to ensure that the computer hardware and software that you currently use is year 2000 compliant and although Cybec would be pleased to assist you in this evaluation process in relation to its products, it cannot be held responsible for any consequences which arise as a result of continued use of non compliant technology interfaced with its software or otherwise.

Conclusion

Subject to the Legal Statement, the above information is a true and accurate statement of the conformity as at 26 March 1998.
