${}^{\$1}{}^{\#2}$H-INT Search

Specially for Windows NT users:

The IntWin package includes a <u>Full Text Search</u> facility based on a 16 bits dynamick link library file hintsrch.dll. Because it is a 16 bits program it is incompatible with Windows NT's WinHlp32.exe program, and if the search facility is initialized and used, Windows NT will change to the 16 bits help program WinHelp.exe.

For Windows 3.1x/Windows 95 users:

hintsrch.dll is compatible with both Windows 3.1x and Windows 95.

Initialize:

<u>Initialize hintsrch.dll to enable the Find Text button</u> (changes to WinHelp.exe and opens IntWin in the Contents topic if invoked from NT WinHlp32.exe)

<u>Back</u>

1$ H-INT Search
2# idHS_init

^{3}#$_4$Hintsrch.dll is already initialized, and the Find Text button is active, provided that hintsrch.dll was available

3$ Hintsrch.dll is already initialized, and the Find Text button is active, provided that hintsrch.dll was available
4# hintsrch_is_initialized
