Using Registry Backup and Restore

With Registry Backup and Restore, you have the following two options:

- Back-up your registry: This backs up your current registry.

- Restore your registry: If you select Restore, a list of registry backups appear. The registry that setup backed up originally is called Original.

Backing Up Your Registry

Use the following procedure to back up your registry.

1. From the Start taskbar menu, point to Programs, 2000 Toolbox, and then choose Registry Backup and restore. The Registry Backup & Restore Wizard appears.

2. Click Next. The next panel of the Registry Backup & Restore Wizard appears.

3. Select Backup and click Next. The next panel of the Registry Backup & Restore window appears.

4. Type a comment in the textbox, and then click Finish to complete the backup process.

Restoring Your Registry

Use the following procedure to restore your registry, using a backup.

1. From the Start taskbar menu, point to Programs, 2000 Toolbox, and then choose Registry Backup and restore. The Registry Backup & Restore Wizard appears.

2. Click Next. The next panel of the Registry Backup & Restore Wizard appears.

3. Select Restore and click Next. The next panel of the Registry Backup & Restore window appears.

4. Select a backup you want to restore, and then click Finish to complete the restore process.
