The workbook could not be opened. Check to make sure the workbook file is valid

The Laroux virus found, but could not be removed (either the workbook structure is protected, or the workbook is shared).

The Laroux virus was found and removed, but the workbook could not be saved (either it is read-only, or a disk error occurred).

The workbook could not be opened because a file by the same name was open at the same time.

The workbook was password protected and/or reserved for Excel '95 users.

The workbook was not searched because the Laroux virus can only infect files that have changed since July 1996.

All open workbooks have been searched. The Laroux virus was not found in any of the workbooks.

Scan complete.

You should save over the original workbooks to ensure the virus is permanently removed.

Because the Laroux virus was discovered in July 1996, workbooks that have not been saved later than that date are unlikely to be infected with this virus. Do you have a saved later than that date are unlikely to be infected with this virus.

Scan complete. No files were found that contained the Laroux virus.

Scan aborted. No files were found that contained the Laroux virus.

Do you want to scan more folders?

Do you really want to abort the virus scan?

Please close this file and then use the Virus Search command in the Tools menu to restart this search.

This Microsoft Excel Virus Search Add-In will not function in the Mac environment.

Microsoft Excel can detect and remove the Laroux virus in your workbook files. Do you want to search for this virus?

You cannot open more than one file at a time with the Virus Scan Add-in installed.

Could not remove all macros. The workbook may be protected or shared. This workbook will be closed.
