System Requirements:

=====

CPU: 233 MMX (MMX required), P II recommended
Ram: 64 meg
OS: Windows 95 with DirectX, Windows 98, Windows NT (Service Pack 3)

Getting Started:

=====

We have installed icons in your start menu to run the demo, read this readme file, and to uninstall the demo.

Before playing any demo or changing any settings, you will be asked to create or select a player name. To begin playing the single player demo mission, click on "Battles". To play a multiplayer game on NovaWorld, just select "Play on NovaWorld" from the main menu. If you wish to host your own multiplayer game or change your multiplayer configuration, select "NovaWorld Options" from the main menu.

You may want to review the "Settings" menu before playing, to customize the game. If you have a joystick and wish to use it in the game, go to the "Joystick" page in the "Settings" screen and select Windows Joystick. The game will then let you use the joystick that Windows is configured to use. If you need to calibrate or adjust your joystick settings, do that from the "Game Controllers" control panel from Windows.

Have fun and enjoy the Armored Fist 3 Demo.

Technical Support:

=====

If you are having a problem you need assistance with, check our websites (<http://www.novalogic.com> or <http://novaworld.net>) for up-to-date information on the product. If you do not find the answer to your problem, you can contact us by the following means:

email: support@novalogic.com
fax: 1.818.880.3448

When contacting us by email or fax, note as completely as possible the nature of the problem and particulars about your system (CPU, speed, video and sound card types).
