

Thank you for your purchase of On Vacation™.

To install On Vacation, you should login as the user that the software is licensed to.

To install On Vacation, follow these instructions:

Double click on the OnVacation installer package (OnVacation.pkg). Select the Install button and then select the architectures you wish to use.

Finally, click on the Install button in the panel to complete installation. When the installation is complete you are ready to use On Vacation.

If you are using UUCP as your mail transport mechanism, you will also need to install the UUCP_Patch installer package (UUCP_Patch.pkg). This should be done as the root user on the system where UUCP mail is delivered.

To install the UUCP Patch package, follow these instructions:

Double click on the UUCP Patch installer package (UUCP_Patch.pkg). Select the Install

*button and then select the architectures you wish to use.
Finally, click on the Install button in the panel to complete installation. When the installation is complete you are ready to use On Vacation on a UUCP-based system.*
